**DETAILED ACTION**

***Priority***

1. Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

***Claim Rejections - 35 USC § 102***

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1-7 are rejected under 35 U.S.C. 102(b) as being anticipated by Yokoe et al. (Yokoe) (US 5,481,367).

With regard to claim 1, Yokoe discloses a print system (Figure 1) comprising: a client device (host computer 5) that deals with print data, the client device including related data setting unit that sets related image data for the print data (col 2, lines 55-63), and a transmission unit (controller 1) that transmits the print data and the related image data (col 2, lines 64-67), and a print control device (controller 1) connected to the client device (col 2, lines 21-32), the print control device including a receiving unit (RAM 4, buffer 4A) that receives the print data and the related image data from the client device (col 2, lines 33-38). and a memory (RAM 4) that stores the print data and the related image data in correspondence with the print data, wherein at least one of the client device and the print control device includes an output unit that output the related image data when requested by a user (col 2, lines 54 – col 3, line 16).

Art Unit: 2622

With regard to claim 2, Yokoe also discloses wherein the output unit includes at least one of a display (host computer 5) that displays the related image data and a printer engine (laser printer 7) that prints out the related image data stored in the memory of the print control device (col 3, lines 11-16).

With regard to claim 3, Yokoe also discloses wherein the related data setting unit sets at least one set of related image data for one set of print data (col 2, lines 55-63).

With regard to claim 4, Yokoe also discloses wherein the related data setting unit selects one of the at least one set of related image data as representative image data, and the output unit outputs the representative image data (col 2, lines 55-63).

With regard to claim 5, Yokoe also discloses wherein at least one of the client device and the print control device further includes an input unit (key panel 10) through which a user selects at least one page of the print data stored in the memory of the print control device (col 2, lines 30-32), and a printer engine (laser printer 7) that prints out the at least one page selected by the user (col 3, lines 11-16).

With regard to claim 6, Yokoe also discloses wherein when the user has selected a plurality of pages of the print data, the printer engine prints out the plurality of pages in an order in which the user has selected the plurality of pages (col 2, lines 54 – col 3, line 16).

With regard to claim 7, Yokoe also wherein the print control device further includes an erasure unit that erases print data for page other than the at least one page selected by the user from the memory (col 3, lines 17-20).

Art Unit: 2622

***Claim Rejections - 35 USC § 103***

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

5. Claim 8 is rejected under 35 U.S.C. 103(a) as being unpatentable over Yokoe et al. (Yokoe) (US 5,481,367) in view of Murahashi (US 5,864,652).

With regard to claim 8, Yokoe does not clearly teach wherein the related data setting unit generates reduced data by reducing the print data by a predetermined reduction rate, the related data setting unit setting the reduced data as the related image data.

Murahashi discloses a printer that includes wherein the related data setting unit generates reduced data by reducing the print data by a predetermined reduction rate, the related data setting unit setting the reduced data as the related image data (col 5, lines 33-43).

There fore it would have been obvious to one of ordinary skill in the art at the time of the invention to have modified Yokoe to include wherein the related data setting unit generates reduced data by reducing the print data by a predetermined reduction rate, the related data setting unit setting the reduced data as the related image data as taught by Murahashi. It would have been obvious to one of ordinary skill in the art at the time of the invention to have modified Yokoe by the teaching of Murahashi to achieve greater storage as taught by Murahashi in col 5, lines 33-43.

Art Unit: 2622

The limitations of claims 9-27 are met by the rejections above.
